Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

Total Sprint Points = 60 Total Sprint = 4

Average Velocity = 60/4 = 15

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agilesoftware development methodologies such as <u>Scrum</u>. However, burn down charts can be applied to any project containing measurable progress over time.
